

TEACHERS' LOUNGE

Science Experiment Learning Lab

Teachers Only

Genius Room – First Floor/West (Aviation Gallery)

This come-and-go session gives teachers the opportunity to experience and learn five easily replicated fun and engaging hands-on STEM activities. The activities can be easily leveled for a large age range and are aligned to Oklahoma Academic Standards.

Teachers who turn in their event surveys at the end of the day will receive a take-home kit that includes activity sheets materials and curriculum for all five activities! Surveys must be turned in between 2-2:30 pm at the EPSCoR table in the museum lobby to receive the materials (along with another fun gift).

Experience these engaging science activities and learn how to implement them in your classroom:

WIND TURBINES

Engineering can be a breeze! Design, build, and test a variety of wind turbine blade prototypes to discover which characteristics best transform the power of the wind into energy.

EARTH BATTERY

Need a little emergency power? Look no further than your backyard. With a little help from a couple of metals, you can turn the dirt in your garden into a workable battery.

SPIN CHROMATOGRAPHY

Ever wonder what solutions and mixtures are hiding in everyday objects like ink? This artistic approach puts a whole new spin on separating the components of a solution.

DID YOU CATCH THAT DOPPLER SHIFT?

What does an entertaining game of catch the buzzer have in common with a passing train? They both can be great examples of the Doppler effect.

WHAT'S LIVING ON MY CELL PHONE?

Cell phones are statistically one of the dirtiest things we own. When was the last time you cleaned your phone? More importantly what could be there now, right under your...ear?

Light refreshments are available to teachers in the Lounge Session throughout the day.
